

GO TO TRAVEL - Master Product Prompt

Project Vision

GO TO TRAVEL is a gamified tourism platform that transforms ordinary travel routes into exciting adventures.

Unlike traditional navigation applications that focus on helping users reach their destination as quickly as possible, GO TO TRAVEL focuses on making the journey itself meaningful, memorable, and enjoyable.

The platform is designed to encourage users to leave their homes, discover new places, explore local communities, and experience tourism in a more engaging way.

Core Philosophy:

"The Route Is The Adventure"

The destination is no longer the only goal.

The journey itself becomes part of the tourism experience.

Problem Statement

Many travelers focus only on their final destination.

Most users:

- Search for a destination
- Open Google Maps
- Follow the fastest route
- Arrive at the destination

As a result:

- Local businesses along the route are often ignored
 - Community attractions receive less visibility
 - Travelers miss many interesting places
 - Travel experiences become repetitive and predictable
-

Solution

GO TO TRAVEL introduces an Adventure Route system.

Instead of simply navigating users from Point A to Point B, the system creates an adventure-filled journey through meaningful checkpoints before reaching the final destination.

Each route is designed to:

- Increase curiosity
- Encourage exploration
- Promote local discovery
- Create memorable experiences
- Support community businesses

The goal is not to reach the destination faster.

The goal is to make users excited about the journey before it even begins.

Product Positioning

Google Maps helps users know how to get somewhere.

TikTok helps users discover places worth visiting.

GO TO TRAVEL helps users become excited about the journey itself.

GO TO TRAVEL transforms travel from:

"Where should I go?"

into

"What adventures will I discover along the way?"

Target Area

Initial Project Scope:

Pattaya City, Thailand

The project focuses on creating Adventure Routes within Pattaya before expanding to other destinations.

This allows the platform to validate user behavior, community engagement, and tourism impact within a manageable scope.

Core User Flow

Step 1

User selects a destination within Pattaya.

Example:

- Walking Street
 - Jomtien Beach
 - Terminal 21 Pattaya
 - Sanctuary of Truth
-

Step 2

Mascot Scout begins exploring.

The mascot acts as a travel companion and route explorer.

Instead of immediately showing directions, the mascot discovers interesting experiences along the route.

Step 3

Adventure Route is generated.

The route contains multiple checkpoints such as:

- Local cafes
- Community restaurants
- Hidden attractions
- Photo spots
- Cultural locations
- Community businesses

The route is presented as an upcoming adventure rather than a navigation path.

Step 4

User starts the journey.

As the user visits checkpoints, they unlock experiences, memories, and rewards.

Step 5

Memory Collection

Users collect:

- Photos
- Route Stamps
- Checkpoint Memories
- Mascot Encounters
- Route Achievements

All collected content is stored inside the Memory Book.

Step 6

Route Completion

After completing the Adventure Route, users receive rewards and complete their travel story.

Mascot Scout System

The mascot is not simply a virtual pet.

The mascot serves as a travel scout.

Its purpose is to build anticipation before a trip begins.

The mascot should make users feel:

"I want to experience this route."

rather than

"I only want to reach the destination."

The mascot helps transform travel planning into part of the adventure.

Memory Book

Memory Book functions as a digital travel journal.

Users can collect and review:

- Photos
- Checkpoint visits

- Completed routes
- Achievements
- Travel memories

Every completed Adventure Route becomes a collectible travel story.

E-Voucher System

Users can earn rewards after participating in Adventure Routes.

Rewards may include:

- Community discounts
- Cafe discounts
- Restaurant promotions
- Tourism-related rewards

The purpose of the E-Voucher system is to encourage community engagement and support local businesses.

Community Impact

GO TO TRAVEL does not directly increase tourism revenue.

Instead, it creates behaviors that contribute to community growth.

Adventure Routes encourage travelers to:

- Visit more locations
- Discover overlooked businesses
- Spend more time exploring
- Engage with local communities

This increases opportunities for local economic activity and tourism distribution.

Success Metrics

The project measures behavioral impact rather than direct economic impact.

Key metrics include:

- Route Completion Rate
- Checkpoint Visit Count
- Community Discovery Count
- Memory Book Completion Rate

- E-Voucher Redemption Rate
 - Number of New Places Discovered
 - User Engagement Rate
-

MVP For NSC Demo

The demo version should focus on:

- Destination Selection
- Mascot Scout Experience
- Adventure Route Presentation
- Checkpoint System
- Memory Book
- Basic Reward System

The objective is not to build a fully commercial tourism platform.

The objective is to demonstrate how GO TO TRAVEL can transform ordinary travel into an adventure while encouraging exploration and community discovery.

Final Philosophy:

GO TO TRAVEL exists to make people excited to leave home and discover what lies between where they are and where they want to go.
